ABSTRACT

Sorter/organizer for file folders or other objects, includes at least three planar walls arranged parallel to one another and including a front wall, a rear wall and at least one dividing wall arranged between the front and rear walls. Side walls are connected to the three walls with each having a lower edge coplanar with a lower edge of the front wall and arranged to enable a bottom of the compartments to be positioned at varied heights. A first stepped bottom wall is connected to the three walls and to at least one side wall such that at least two compartments receivable of objects and staggered in relation to one another are formed. At least one side wall has upper edge portions connected to the first bottom wall. Ledges extend above the upper edge portions of the side walls and alongside a bottom of a respective compartment.
